Molex FiT Families Power Connectors
Scoop proof contacts protect contacts from being damaged during mating/unmating

Molex’s FiT families feature scoop proof contacts designed to protect critical contacts from damage associated with mating and unmating. With a scoop proof design, contacts are protected until the mating connectors are properly aligned. Therefore, damages related to aggressive unaligned mating and unmating are virtually eliminated.

The FiT families power connectors include Mega-Fit®, Mini-Fit®, Ultra-Fit™, Micro-Fit 3.0™ and the Nano-Fit™ product lines, all of which are readily available in various circuit sizes and plating options.
